Re: PFAS

Specifically, as pertains to polyethylene items manufactured from materials that are FDA approved for food contact.

New Tech Plastics does not intentionally add perfluoroalkyl and polyfluoroalkyl substances (the two classes of substances of a group of molecules broadly termed PFAS) during the manufacture of polyethylene film or bags that have been ordered to be manufactured from raw materials that are FDA approved for food contact, subject to any limitations described in the specific FDA regulations.

Furthermore, New Tech Plastics has determined that our suppliers of the raw materials purchased to manufacture polyethylene items for food contact do not contain intentionally added perfluoroalkyl and polyfluoroalkyl substances.

While we have not specifically analyzed for the presence of PFAS, we have no reason to suspect that it would be present in our finished product.

Sincerely,
NEW TECH PLASTICS
